

concrete is a wet application. This process is known as wet mix. The following steps should be followed to ensure a high quality concrete finish. It is important to ensure that the concrete is applied in a consistent manner.

Site Safety

When working on a construction site, it is important to ensure that all workers are wearing appropriate safety gear. This includes hard hats, safety glasses, and high-visibility clothing. It is also important to ensure that all workers are trained in the proper use of the equipment and materials. This includes understanding the risks associated with the work and how to avoid them.

Methods

Hand Trowel Application

Continuous Layer Measurement

- Apply a thin layer of concrete to the surface.
- Measure the thickness of the layer with a trowel.
- Repeat the process until the desired thickness is reached.
- Remove the trowel and allow the concrete to set.
