

Contents measurement in iron ore and coal

The challenge

Our electromechanical system MFC608 M6000 is an electromechanical system with additional advantages because of the tape sensor with integrated tape cleaner. Thus, the costs for maintenance is reduced. The M6000 delivers reliable results and offers long life and stability also in difficult conditions. At in all, 90 units of series M6000 have been installed in various applications.

Our solution

Our electromechanical system MFC608 M6000 is an electromechanical system with additional advantages because of the tape sensor with integrated tape cleaner. Thus, the costs for maintenance is reduced. The M6000 delivers reliable results and offers long life and stability also in difficult conditions. Products

M6000 Tape Version

Continuous Level Measurement

- Suitable for use in most bulk materials.
- Integrated tape cleaner to remove sticky materials.
- Mounting with threaded or flange connection.
- Measuring range up to 50m.
- Constant level monitoring via Modbus interface together with cost competitive Model 3000-6000.
