

Level limit measurement in fish food

The challenge

Our customer from Norway supplies complete feed stations, e.g. launch solutions for fish farms worldwide. He requested a simple but reliable level control in his divers breeding pools. Thus, he can monitor and control the feeding in the pools with preventing the emptying of any pool.

Our solution

The UWT rotating paddle switch ROTONIVO RN4000 is the perfect solution for this application. Especially the fibre-glass reinforced housing made from plastic is absolutely insensitive to the rough conditions near the sea. The high-quality sealing and bearing allow the reliable measurement also in dust.

Produits

CN 4020

Détecteur de plein, de besoin et de vide

Version courte

- Montage vertical, horizontal et oblique dans le container
- Très compact à partir d'une longueur de bras de 155 mm
- Aucun calibrage nécessaire
- Compensation de l'accumulation active
