

Level limit measurement in humid feed mixtures

The challenge

Our required to monitor the back build-up of material during the inflow of material into an animal feed press. The shaft of the rotating paddle detector is exposed to enormous loading in this application because of very high temperature and steam in the funnel.

Our solution

The rotating paddle detector ROTONIVO RN3000 series fulfills these extreme requirements. This is made possible through the high quality and the development of a special bearing and sealing in the tube, suitable for such dusty environments. With these features, the RN3000 series is predestined for such applications in many areas of the animal feed sector.

Produits

RN 3004

Détecteur de plein, de besoin ou de vide

Version avec tube de protection

- Montage vertical, horizontal et oblique dans le container
- Très résistant mécaniquement grâce au bras dans le tube de protection
