

Level limit measurement in humid feed mixtures

The challenge

Our required to monitor the back build-up of material during the inflow of material into an animal feed press. The issue of the rotating paddle detector is excessive abrasive loading in the application because of very high temperatures and steam in the funnel.

Our solution

The rotating paddle detector PICOBOX P9000 series fulfils these extreme requirements. This is made possible through the high quality and the development of a special bearing and sealing in the tube, suitable for such duty environments. With these features, the P9000 series is a predecessor for such applications in many areas of the animal feed sector.

Features

P90 0004

Détecteur de plein, de niveau ou de vide

Version avec tube de protection

- Montage vertical, horizontal et oblique dans le container
- Très robuste, spécialement conçu au top dans le tube de protection
