

Level limit measurement in sticky sugar

The challenge

A worldwide renowned supplier of drinks searched for a reliable limit switch in his plant in Minsk, Belarus. The sugar is stored in vessels. The special challenge is the stickiness and the problem of deposit build-up as well as the abrasive attitude of the sugar.

Our solution

UWT offers the rotating paddle switch ROTONIVO RN3001. It is the best solution for very abrasive materials. Our customer can optimize its processes due to the automatisation in the vessels.

Products

RN 3001

Full, demand, empty detector
