

As always when working with electrical equipment, always wear PPE! Please be aware of the importance of safety for everyone in the room when you are using any electrical equipment. Please be aware of the importance of safety for everyone in the room when you are using any electrical equipment.

Procedure

Step 1: Setup

Set up the circuit as shown in the diagram.

- Connect the probe to the capacitor.
- Connect the probe to the capacitor.
- Connect the probe to the capacitor.
- Connect the probe to the capacitor.
- Connect the probe to the capacitor.

Step 2: Measurement

Measure the dielectric constant of the material.

- Measure the dielectric constant of the material.
- Measure the dielectric constant of the material.
