

NBS100 in plastic granular

The Challenge

A well known manufacturer of child safety seats needs in France wanted to install a level indicator in order to be able to reliably perform the material operations. It is important that the sensors can detect different granules and the filling level are always up to date.

Our Solution

The well known company uses the tried and tested measuring system Mulsic 200 for the level measurement in its storage tank. It uses the Mulsic interface for the level visualization and has full and informative all measurement data for a successful filling operation. With 200,000 measuring cycles, the Mulsic sensor is virtually maintenance-free in these storage tanks and always guarantees a valid level indication.
