

Backing up signal in loading belfows for potato starch

The challenge

Our required to monitor the filling of the belfow in the telescopic loading pipe. Potato starch is very dusty and volatile which makes reliable measurement difficult.

Our solution

The LMT rotating paddle detector RCT3000-100000 fulfils these extreme requirements. This is made possible through the RCT3000's high quality alloying steel measurement components to the density of the bulk goods and optimal sealing against dust. With these features the the sensor is predestined for such applications in potato starch.

Products

RCT 3005 Extra Short Version

Level switch for loading belfows

- Short compact design for restricted space within loading belfows.
