

### Key Features

The cell wall is made of peptidoglycan (PG) which is a mesh-like layer of sugar. This is made up of repeating the same sugar as the other sugar, which is linked together by peptide bonds. The cell wall is made up of peptidoglycan (PG) which is a mesh-like layer of sugar. This is made up of repeating the same sugar as the other sugar, which is linked together by peptide bonds. The cell wall is made up of peptidoglycan (PG) which is a mesh-like layer of sugar. This is made up of repeating the same sugar as the other sugar, which is linked together by peptide bonds.

### Structure

#### Key points

Key: Structure of the Cell Wall

- 1. The cell wall is made up of peptidoglycan (PG)
- 2. The cell wall is made up of peptidoglycan (PG)
- 3. The cell wall is made up of peptidoglycan (PG)
- 4. The cell wall is made up of peptidoglycan (PG)
- 5. The cell wall is made up of peptidoglycan (PG)
- 6. The cell wall is made up of peptidoglycan (PG)
