

Level limit measurement in potassic fertilizer

The challenge

A client based in Belgium is one of the biggest companies in the petrochemistry business, and the only producer of phosphoric nitrate fertilizer. They were looking for a full detection device for a series of containers filled with nitrogen-phosphoric potassium fertilizer.

Our solution

The vibrating string level limit switch (M2000), with cable extension, was the optimal solution for this challenge. Due to the high sensitivity of its sensor, a reliable function and fast operation, when in contact with the material, is guaranteed.

Products

M2000

Full, Demand, Empty Detector
Cable extension version

- Vertical installation
- Shaft length up to 2000mm available
