

DIFFERENTIAL PRESSURE TRANSMITTERS

"316 Stainless Steel"

Series DP-4000

• integral zero-point

• high accuracy sensor

• resolution of 0.01%

• accuracy 0.075%

• error 0.001%

• resolution of 0.1 bar

• stainless steel case

• automatic self-diagnosis

• easy installation (DIN 11851)

• pressure sensor: 0.5 MPa

• pressure range: 0.5 MPa

Description

The DP-4000 is a precision differential pressure transmitter with stainless steel case and stainless housing. This ultra-compact and flexible design enables easy installation in narrow spaces. The transmitter is available in various pressure ranges and output signals.

Design: The DP-4000 is a compact and flexible design. It is available in various pressure ranges and output signals. The transmitter is available in stainless steel case and stainless housing. The transmitter is available in various pressure ranges and output signals.
