

INSTRUCTION MANUAL

HydroCar

DESCRIPTION

The HydroCar™ is a hydrocarbon and ammonia based color change test which detects leaks with very high accuracy. The probe has a depth of 1.5m (50 inches), and allows a perfect reading in the 0-100 scale.

The unique detection system is a "Thermochromic" sensing unit, not based on the use of a self-heating liquid (H2O).

The device comes in a robust and long-lasting (100%) ultra-resistant and corrosion resistant.

The probe has a length of 1.5m. The length is a function of the nature of the application being

WARNING

Before working on HydroCar™ read the working and safety manual in page 4. The product and system safety, and the optimum performance, depends on the correct installation of the system before starting.
