

It is a good idea to always wear a lab coat and gloves when working with laboratory equipment. Additionally, it is important to always wear eye protection when working in a lab.

Lab Safety

The lab is a place where you can learn a lot about science. However, it is also a place where you can get hurt. To stay safe, you should always wear your lab coat and gloves. You should also always wear eye protection. This means wearing safety goggles or a face shield. You should never drink or eat in the lab. You should also never use any equipment unless you have been trained to do so.

Finally, you should always clean up after yourself. This means washing your hands thoroughly with soap and water. You should also clean any spills immediately. If you have a spill, you should tell your teacher right away. You should also never touch any equipment unless you have been told to do so. If you have any questions about lab safety, you should ask your teacher.
