

SONATEC INNOVATION

For the fast and accurate determination of the concentration of a liquid in a tank, a very specific ATET-sensitized version of SONATEC is available. Installed on the tank top, the measuring head of the sensorless device can be immersed into the tank to a depth of 2 metres. The extremely light design has a proven track record in various industries and applications. It can be adapted to vessels that are equipped with agitators and nozzles.

Innovation. Dedication. Centec.
