

# More efficiency and reliability in crossflow filtration through automatic filter monitoring

To increase the efficiency of crossflow filtration, MAHLE provides a filter monitoring system for monitoring and automatic cleaning of the filter.

## Advantages

MAHLE provides a filter monitoring system for crossflow filtration systems that has a high degree of reliability and efficiency. The MAHLE filter monitoring system is able to detect when the filter is becoming clogged and to clean it automatically. This ensures that the filter is always clean and that the filtration process is not interrupted. The MAHLE filter monitoring system also provides the advantage of being able to monitor the filter's condition and to clean it automatically.
