

Product Information ILM-4

Inductive Conductivity Meter ILM-4

Application/Specified Usage

- Inductive measurement of the specific conductivity of liquid media in the range of 0...999 mS/cm.
- Designed for hygienic applications in food-, beverage- and pharmaceutical industries.

Application Examples

- · Controlling of CIP processes (e.g. phase separation detergents/water)
- · Concentration measurement (e. g. Alkali and acid concentration in remaking)
- · Monitoring of product quality, quality control

Hygienic Design/Process Connection

- · Hygienic process connection with CLEANadapt
- · Conforming to 3-A Sanitary Standard for versions with DIRECTadapt
- · All wetted materials are FDA-conform
- · Sensor completely made of stainless steel
- · Complete overview of process connections: see order code
- The Anderson-Negele CLEANadapt system offers a flow-optimized, hygienic and easily sterilizable installation solution for sensors.

Features/Advantages

- · CIP/SIP cleaning up to 150 °C/maximum 60 minutes
- · Wear-free, inductive measurement
- · In contrast to conductive measurement procedures, no problems with electrode deterioration or polarization.
- · Accurate measurement through compensation of temperature influences.
- High reproducibility of ≤ 1 % of measurement value.
- Analog outputs for conductivity and temperature are a standard feature.
- Analog outputs for conductivity, temperature or concentration are freely adjustable.
- Rapid temperature response time T₉₀ 15...60 s
- Installation in tube diameters from DN 40

Options/Accessories

- \cdot Version with longer toroid housing for pipes \geq DN 65 or for installation into T-fitting
- · Preassembled cable for M12 plug-in connector
- · Display module Simple User Interface (SUI) and Large User Interface (LUI)
- · Remote version with cable length up to 30 m

ILM-4 / L20 Compact Version

ILM-4R / L20 Remote Version

Large User Interface (LUI)

Measuring Principle of the Inductive Conductivity Meter

An alternating current generates a magnetic field in the primary coil (sender) which induces a current in the circumfluent medium. The current flow in the medium generates another magnetic field in the secondary coil (receiver). The strength of the induced current in the secondary coil depends on the conductivity of the medium. The conductivity of the liquid medium is temperature dependent. To compensate the temperature error, an additional sensor (Pt1000) in the sensor tip is used for monitoring the temperature of the medium. The temperature coefficient (TC-value) of the liquid can be set up in the electronics of the ILM which is used for automatic compensation of the temperature error.

FOOD

Mechanical Connection / Installation

- The sensor has to be installed in that way that the bobbin case is entirely washed around by media and no bubbles can occure.
- Installation in a rising pipe is recommended.
- The inscription "FLOW" on the bottom side of the sensor has to show in flow direction of the medium.
- \cdot Very heavy vibrations can cause measurement errors
- (e. g. installation very near a pump).
- · Use Negele CLEANadapt system for safe operation of measuring point!
- Attention: The maximum tightening torque for mounting is 20 Nm!
- Use a welding mandril for correct installation of CLEANadapt weld-in fittings.
 Please pay attention to the weld-in and installation details in the CLEANadapt product information.

Conditions for a measuring point according to 3-A Sanitary Standard 74-06

- · The ILM-4 is 3-A compliant.
- The sensors are designed for CIP/SIP cleaning. Maximum temperature of 150°C for 60 minutes.
- · Only permitted with the CLEANadapt build-in system (EMZ-351, EMK-351, EHG..., adapter AMC-351 and AMV-351).
- When using the EMZ and EMK weld-in sleeves, the weld must comply with the requirements of the current 3-A Sanitary Standard.
- Mounting position: The mounting position, self-draining properties and position of the leakage hole must be in accordance with the current 3-A Sanitary Standard.

Conventional usage

- Not suitable for applications in explosive areas.
- Not suitable for applications in security-relevant equipment (SIL).
- Note on CE
- · Applicable directives:
- Electromagnetic Compatibility Directive 2014/30/EU • Compliance with the applicable EU directives is identified
- by the CE label on the product.
 The operating company is responsible for complying with the guidelines applicable to the entire installation.

Disposal

- Electrical devices should not be disposed of with household trash. They must be recycled in accordance with national laws and regulations.
- Take the device directly to a specialized recycling company and do not use municipal collection points.

Transport/Storage

- \cdot No outdoor storage
- Store in an area that is dry and dust-free
- \cdot Do not expose to corrosive media
- Protect against solar radiation
- \cdot Avoid mechanical shock and vibration
- Storage temperature 0...40 °C
- Relative humidity max. 80%

Cleaning/Maintenance

• When using a pressure washer, do not point the nozzle directly at the electrical connections.

Reshipment

- Sensors and process connection must be clean and must not be contaminated with hazardous media and/or heat-
- conductive paste. Note the cleaning information!
 To avoid damage of the equipment, use suitable transport packaging only.

Signal modules use cases

The ILM-4 conductivity sensor will operate with the default factory settings. Depending on the choosen signal module, different input and output signals are available. Typical use cases are the following configurations

A42 Signal Module

- 1x Analog Output X45 for conductivity
- A62 Signal Module
- 2x Analog Output X45 and X67 for conductivity and temperature
- A63 Signal Module
- 2x Analog Output X45 and X67 for conductivity and temperature
- 1x Digital Input X3 for external range selection of conductivity

I63 Signal Module

- IO-Link communication X3
- 2x Analog Output X45 and X67 for conductivity and temperature
- 1x Digital Input X3 for external range selection of conductivity

Parameterization

Display

- · Language definition for the display
- **Measurement values**

- Temperature Offset and Unit

Sensor configuration

Monitoring or configuration of the sensor could be performed using IO-Link or the MPI-200 programming adapter with MPI-200-F. It must be ensured that the sensor is permanently connected to the supply voltage while the paramters are being set.

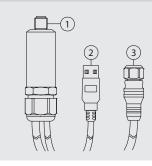

Programming adapter MPI-200-F connection

Connection plug for MPI-200-F adapter as an intermediate plug between the ILM-4 electronics and the MPI-200 connection (3) (see figure below).

Connection of programming adapter MPI-200

- 1: Connection for M12 connector
- 2: USB port for connecting to a PC
- 3: Connection cable to adapter for ILM-4

FOOD

Creating settings with the User Interface (SUI or LUI)

The software structure of the User Interface is similar to that of the PC version. The system is operated using two control buttons to the left and right of the display. These buttons can be used to navigate to the required parameter. The button functions are as follows:

Button	Press briefly	Press and hold
R (right)	Jump to next node, parameter	Edit a node, parameter
L (left)	Jump back to previous node, parameter	Leave editing mode without saving, return to next higher level
R/L	Scroll up and down	
R and L simultaneously		Press both buttons for 10 seconds: the menu jumps back to the beginning (attention: this is not a reset)

The parameters can be changed by clicking through the menu or using an ID code. To use the ID code, press and hold the right button next to the sensor prompt "ID-Search No". The sensor opens the "ID-Search" page on which the necessary ID code can be entered directly.

In the Adjust menu, the following parameters can be set using the ID code:

Parameter/parameter name	Access/setup mode (must be set prior to change)	Search Number (ID Nummer)	Node/module	Value name
Display				
Language	1 Adjust	451010	4 Display	(#)
Conductivity Measurement				
Conductivity 1:				
Temp. Comp. 1	1 Adjust	013031	0 Measure	Conducty 1
Upper Range Value 1	1 Adjust	013091	0 Measure	Conducty 1
Conductivity 2:				
Temp. Comp. 2	1 Adjust	013033	0 Measure	Conducty 2
Upper Range Value 2	1 Adjust	013093	0 Measure	Conducty 2
Concentration C:				
Temp. Compensation C	1 Adjust	013032	0 Measure	Concentr C
Media Concentr. Range	1 Adjust	013061	0 Measure	Concentr C
Upper Range Value C	1 Adjust	013092	0 Measure	Concentr C

Advice

Occuring several media with very different conductivity in the application (e. g. CIP cleaning) switching to an adequate measuring range is neccessary for a precise measurement!

Detecting the Temperature Coefficient of the Medium

Default setting: TC = 2 %/K

- 1. Set "TC" to 0 %/K.
- 2. Submerge the device in 25°C medium.
- 3. Wait until the measurement value stops changing.
- 4. Read off the conductivity from the display and note down the value.
- 5. Heat the medium to at least 60°C. The conductivity value changes in the display.
- 6. Wait until the measurement value stops changing.
- 7. Select the "Temp. Komp." parameter and set the determined TC value.
